

GENERAL HYDROPONICS®

FLORA SERIES® All amounts per 3.79 Liters (1 US Gallon)

All Amounts per 3.79 Liters (1 US Gallon)

Drain to Waste Nutrient Solution Tips:

- Keep nutrient solution temperature below 75° F (24° C).
- Allow 5% - 25% runoff during each irrigation.
- Consider fresh water irrigation after 1 - 3 nutrient applications.
- To flush apply fresh water irrigation after three nutrient applications to flush excess mineral accumulation.
- Keep nutrient solution aerated.
- For best results maintain nutrient solution pH between 5.5 - 6.5.

Troubleshooting factors to consider:

- Arid, bright, hot environments cause plants to drink more than if they are grown where it's humid, dim, and cool. Thus gardeners should use less concentrated nutrient solutions when growing conditions are more intense in order to lessen the risk of overfeeding.
- The pH (acidity or alkalinity) of a nutrient solution affects the availability of the elements contained within. Use GH pH adjusters to maintain nutrient pH between 5.5 - 6.5.

Which comes first, Armor Si or CALiMAGic?

- When using both Armor Si and CALiMAGic, add Armor Si to the reservoir first.
- When using Armor Si and/or CALiMAGic, with Flora Series, these products should be added prior to adding FloraMicro.
